

innovez-one

The leading provider of maritime software solutions

Our proprietary port management software: **marine** 
Reshaping Marine Services

Innovez One Vision

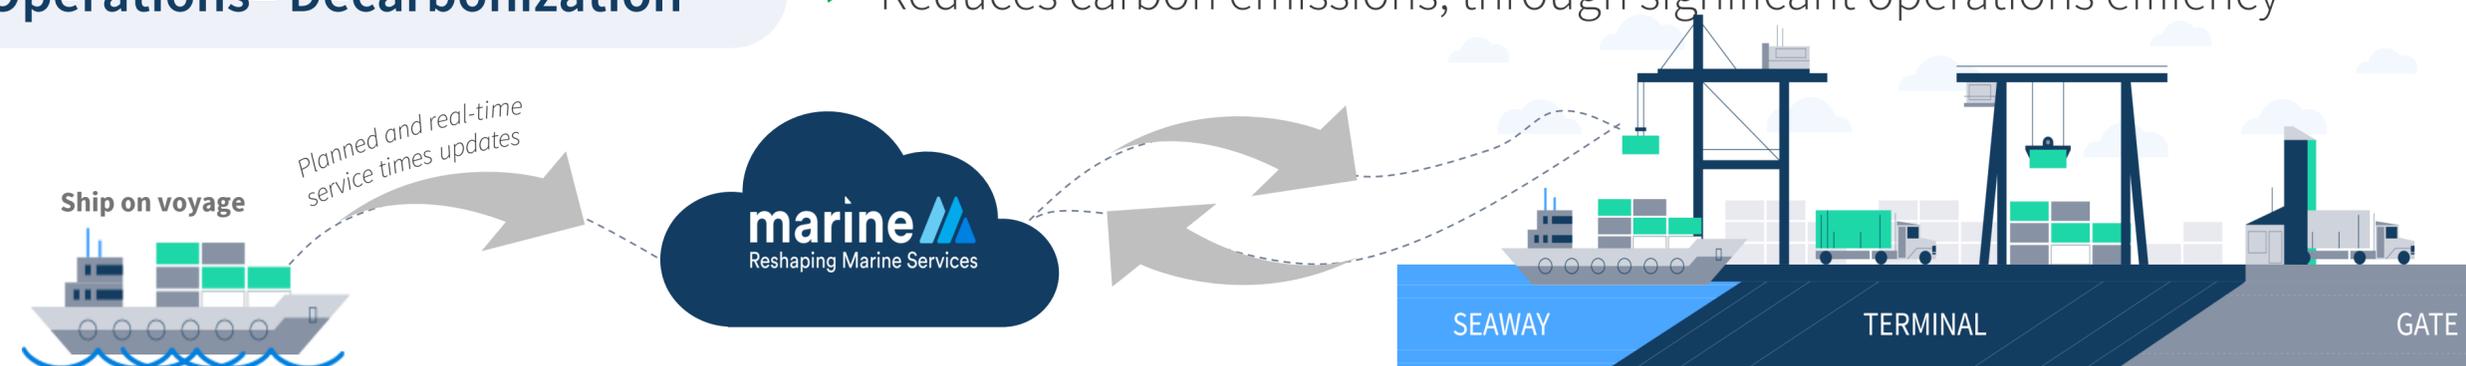

Supercharge maritime ports through **digital intelligence**, **automation**, and **global connectivity**—accelerating the movement of goods and setting new standards for efficient, transparent, and sustainable transport.

Benefits of MarineM Platform

Transforming Global Port Operations with A.I.

-  **Revenue Assurance with Cost Savings**
 - ✓ Reduce waste and fuel, streamlines accurate billing processes
-  **Driving Operational Efficiency**
 - ✓ Optimize operations, enhance utilization of assets for max productivity i.e. timeliness for arrival, reduction of vessel idle times, on-time pilotage
-  **Lowers Fuel Consumption**
 - ✓ A.I. based efficient tug assignment, reduces overall time and fuel.
-  **Unmatched Global Visibility**
 - ✓ Real-time insights of local / global operations, utilization ratios, financials
-  **Maximize Port Capacity**
 - ✓ Optimized ship turnaround times, enhances port throughput
-  **Sustainability Operations- Decarbonization**
 - ✓ Reduces carbon emissions, through significant operations efficiency

Pressing Problems in Maritime Ports Today

A complex chain to support vessel arrivals

Internal Operational Challenges

- Multi-logistics – assigning suitable pilots, tugs, pilot boats & cars for each job
- Operational resource constraints – e.g. pilot suitability, optimum tug selection
- Delays in pilotage movements

External Operational Challenges

- Delays to vessels ETAs
- Environmental constraints, e.g. tidal, weather, berth limitations

A Domino Effect

- Cost impact: fuel, time loss
- Impact to next schedule windows
- Environmental impact: increased emissions due to idling

Pressing Problems in Maritime Ports Today

Billing Challenges

- Silo systems, even paper driven processes
- Inaccurate service details
- Service time disputes
- Complex billing rules
- Billing errors and delays

Pilot sheets used by pilots in one of the largest port group in the UK

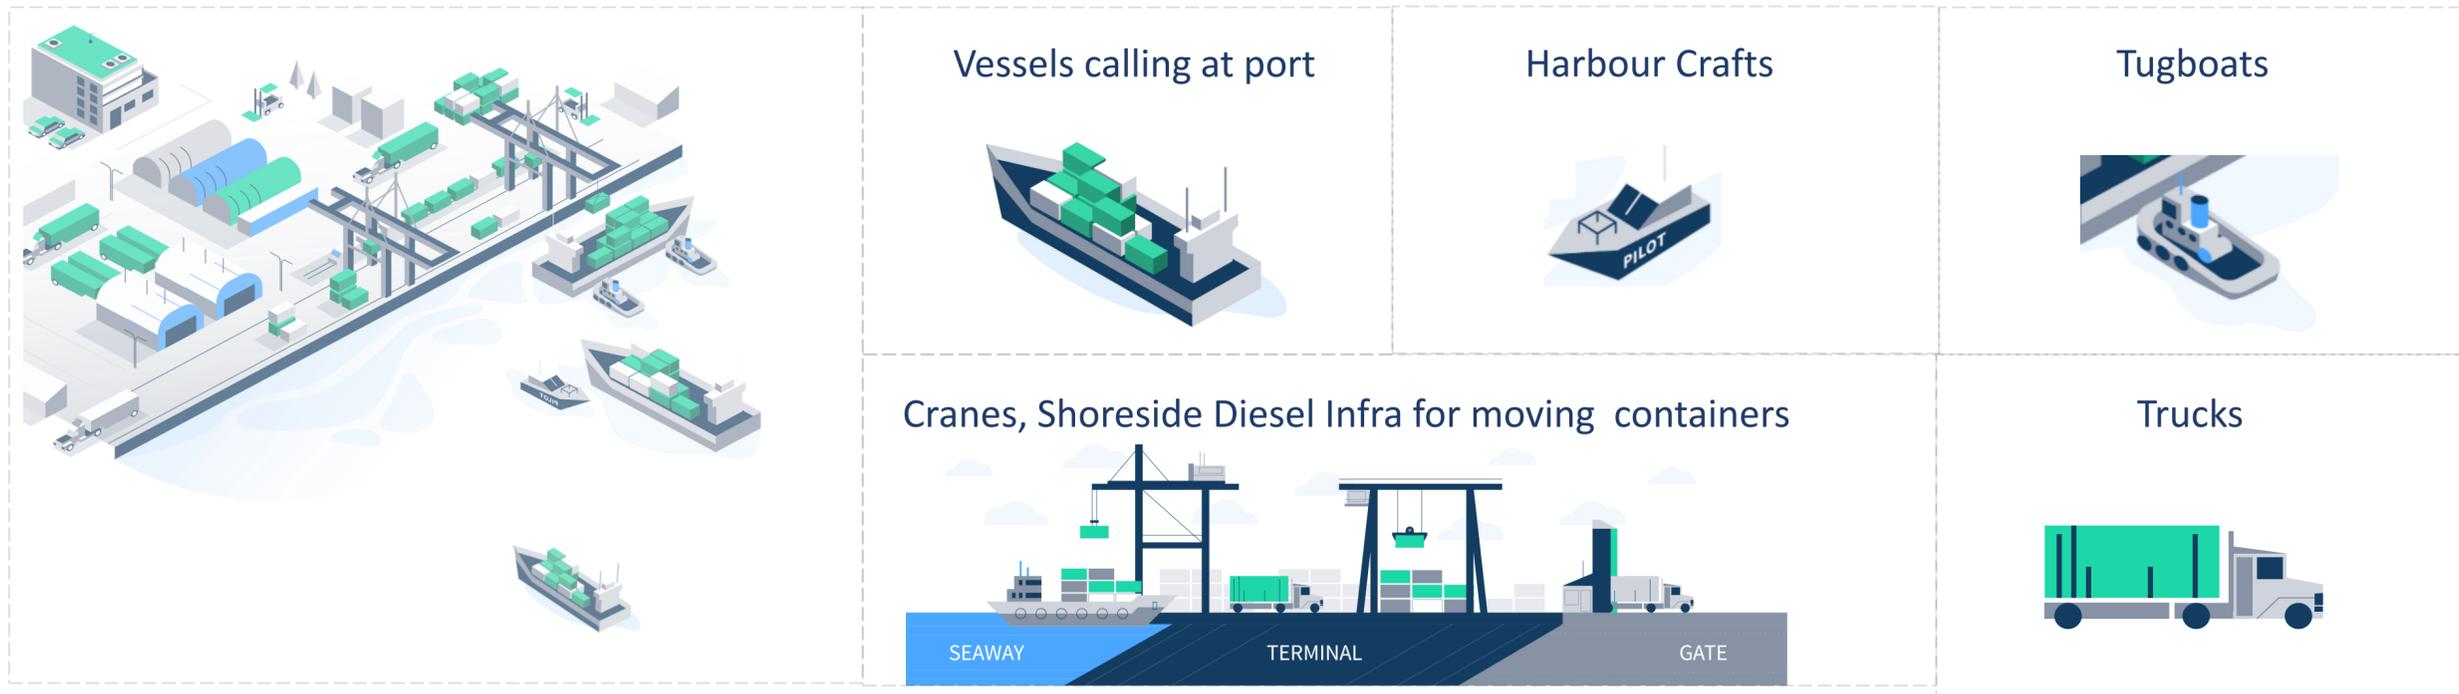

Environment Problems in Maritime Ports

- Transportation accounts for **24% of global CO2 emissions**

(mainly transports of oil, gas, water, steam and other materials via pipelines)

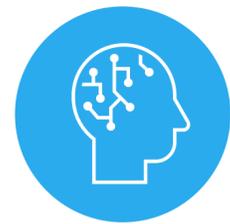

- Port Emission Sources

About Innovez One

Leading global provider for mission-critical **Port Management Information System (PMIS) platform – marineM** for the world’s busiest ports, pilot and towage operators.

Over 2 decades in maritime digitalization, over 10 years R&D in A.I. optimization planning

Actively involved with International Port Call Optimization group to define standards. Member of International Harbour Master Association (**IHMA**) and United Kingdom Harbour Master Association (**UKHMA**) Located in **Singapore (HQ), Jakarta and London**, we are a trusted partner for ports of all sizes.

AI-Based Marine Scheduling Engine for our Marine Job Planner:

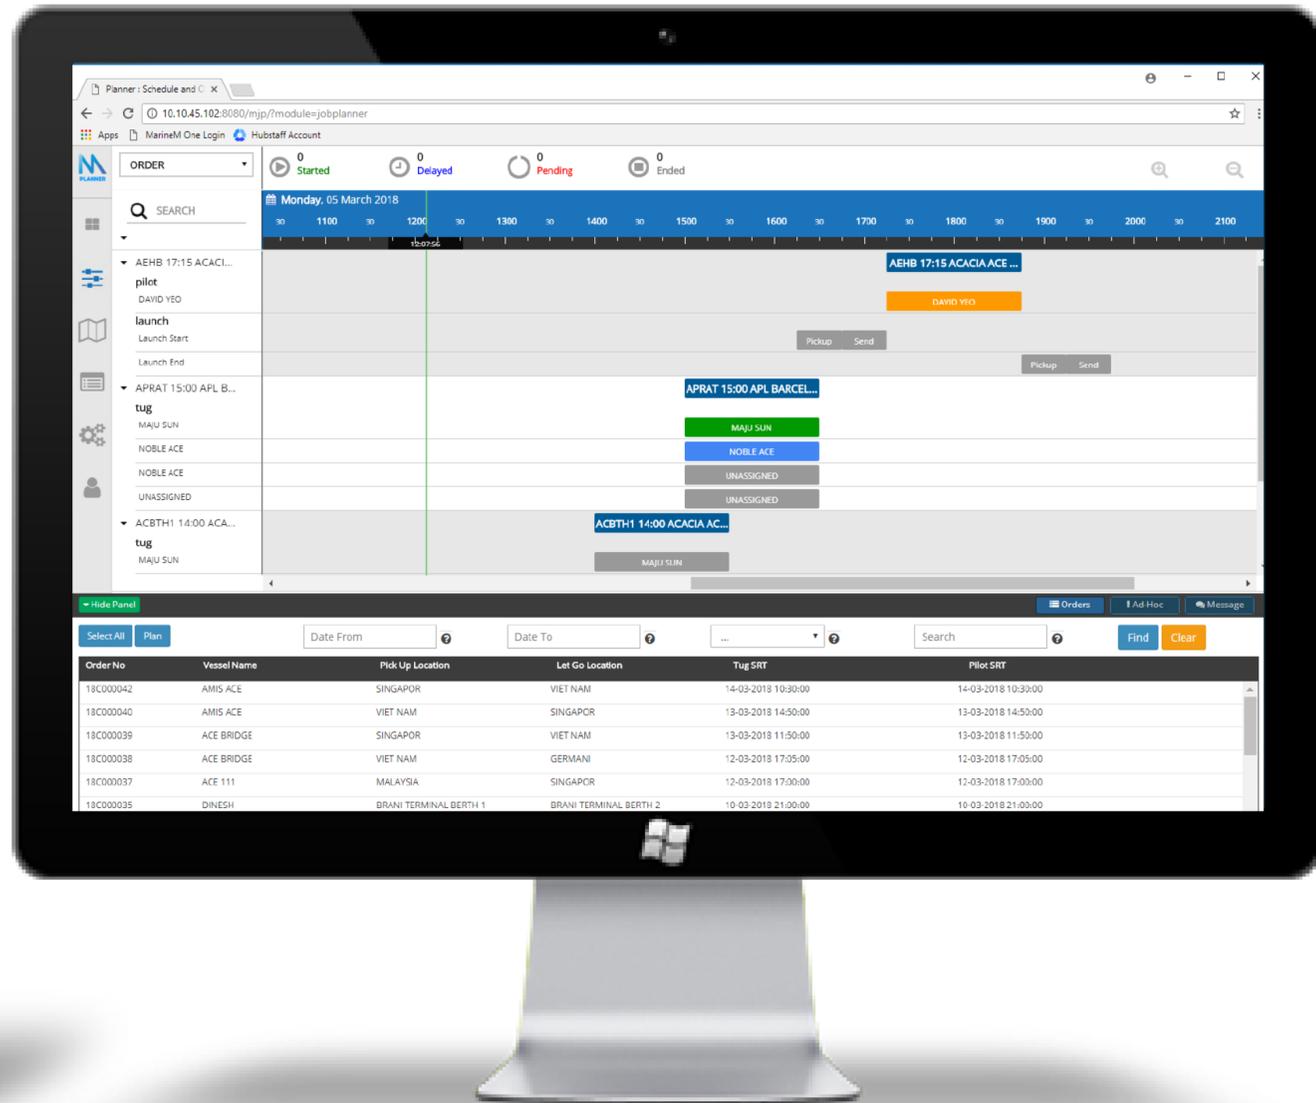

- Capable of considering a myriad of constraints:
 - Pilot, tugboat shifts and availability
 - Environmental conditions, e.g., tide, weather
- Optimise nautical service operations

Use Case

How MarineM benefitted **Port of Tanjung Priok**, the 22nd busiest port in the world?

Reduced Waiting times:
2.4hrs to **30.6mins**

Optimised Use of Tug:

20% reduction in distance travelled
\$ 500k pa fuel savings
\$ 90k pa maintenance cost savings

Reduced Accidental Damage from Tug Misuse:
\$150k pa

Pay Back from Installation:
6 months

- Owner Agents are happy with vastly **improved visibility** of berth availability.
- **WFH platform** enabled management to resume operation in face of Covid 19.

Products Software

The screenshot displays a web-based vessel tracking system. The main map shows Jurong Island and the Tuas Mega Port area. A detailed view of the vessel MARINE SELENA is shown in the top-left corner, including its speed (6.9), latitude (1.2264968571988635), longitude (103.66063085767564), heading (164), width (30), length (80), and updated time (2025-07-18 02:48:22). The interface also features a control panel with options to center on a vessel, show course, heading, route, and route markers lines. A playback control bar at the bottom allows for speed adjustments (0.25x, 0.5x, 2x, 4x) and includes an 'EXIT' button. An inset map on the right shows a broader geographical context with red and orange tracks indicating vessel movement patterns.

ADNOC Logistics and Services

The maritime and logistics arm of the Abu Dhabi National Oil Company, providing integrated shipping, offshore, and port services to support the UAE's energy supply chain globally.

Deployed **marineM** PMIS for **4 Ports in UAE**

Supports Vessel Booking, A.I. based Planning and Dispatch, and Billing. Covers berth-jetty and SPM operations.

Using A.I. based scheduling, marineM reduces scheduling, and deployment time from 3 hours to 45 seconds per port call. Improved utilization over 20% and reduced fuel consumption and associated costs by over 20%

ADNOC L&S Deploys Artificial Intelligence to Optimize UAE Petroleum Ports Operations

ADNOC L&S Deploys Artificial Intelligence to Optimize UAE Petroleum Ports Operations

AI-powered smart port solution developed by Innovez One reduces service sourcing time for vessels from 3 hours to 45 seconds

Solution set to save 3,000 hours annually

First-of-its-kind technology in the GCC increases jetty utilization by 20%, streamlining vessel turnaround

Abu Dhabi, UAE – September 10, 2025: ADNOC Logistics and Services, announced today it has deployed the first AI-powered Smart Port Solution in the GCC to optimize petroleum port operations. The solution streamlines resource allocation and enables real-time tracking of marine activities to improve operational efficiency, reduce costs, and enhances sustainability across ADNOC L&S's petroleum ports in the UAE.

The innovative solution, developed by Innovez One, a leading provider of a port management information system (PMIS), reduces vessel turnaround time by up to 90%, cutting service sourcing time from three hours to just 45 seconds. By saving 3,000 hours annually, the solution is expected to deliver \$950,000 (AED3.5 million) in operational savings by 2028. The solution also increases jetty utilization by 20%, improving overall port efficiency, which is projected to deliver a 10% improvement in vessel management.

Captain Abdulkareem Al Masabi, CEO of ADNOC L&S, said: "The deployment of the smart port solution across our petroleum ports in the UAE, underscores our commitment to harnessing AI, as we continue to invest in innovation to optimize our operations and drive further value for our business and customers."

Recent PMIS Projects

Port of Tanjung Pelepas

Part of APM terminals, the **Port of Tanjung Pelepas (PTP)** is Malaysia's busiest transshipment hub, handling over **80 vessel movements daily** and processing more than **11.2 million TEUs annually**, making it one of the top 15 container ports globally.

Deployed marineM PMIS for **over 3 years**

Supports Agent Vessel Booking, A.I. based Planning and Dispatch, and Billing. Fully integrated to Malaysia's Single Maritime Window. Covers berth-jetty operations.

Using **A.I. based scheduling, marineM enhances**

scheduling efficiency for over 50 pilots, 10 tug boats and 5 pilot boats. The port handles more than 80 vessel movements in a single day.
